Meech Appoints New Product Manager

Meech continues to expand its operations and is pleased to confirm the recent appointment of Joe Burnell as Product Manager for Meech Air Technology. Joe is a Mechanical Engineering graduate and in his new role will be responsible for implementing the Meech global strategic growth plan for the MAT Division.

Meech manufactures a wide range of compressed air and energy saving products, that also help to reduce noise levels and cool efficiently.

Product News: New 992v2 Static Generator

Meech recently launched the Model 992v2 30kV Static Generator. The new product incorporates the latest technological advances to generate a controlled level of static charge and create a temporary bond between materials.

The 992v2 is ideal for static pinning applications and can be wall mounted or installed on a floor/workbench. It is easy to use and incorporates a

large, high visibility digital display. The 992v2 also offers advanced functionality such as remote switch on/off and safety features such as "flashover" detection.

For more information on the 992v2 Generator, download a copy of the datasheet from our website (www.meech.co.uk/pdf/files/992v2-1.pdf) or call Mike Chennells on 01993 706700.

Product Update: Cabinet Cooler

Now that summer has finally arrived, the Meech Cabinet Cooler System provides the simplest method for supplying a maintenance-free supply of chilled air.

The cabinet cooler is constructed in stainless steel, has no moving parts and uses compressed air only. It is capable of lowering temperatures to -40°C . With a constant compressed air input pressure and temperature, the cooler will hold the output temperature to within $\pm 0.6^{\circ}\text{C}$.

Chinaplas 2006

Chinaplas 2006 was a great success with more than 500 visitors to the Meech stand. It provided the opportunity to showcase the full range of Meech static control equipment and to present the professional service and strong technical support that it is able to offer locally.

NPE 2006

Meech Static Eliminators USA just completed a very successful exhibition at the National Plastics Exposition (NPE) show in Chicago, IL USA. The largest plastics show in 2006 boasted over 2000 exhibitors and over 65,000 attendees. Meech displayed its full line of static and dust control products. The new 992v2 Static Generator systems used for applications such as in-mould labelling, and 976 Pulsed DC Systems that provide long range ionisation without the use of air attracted particular interest.

JetStream

Meech is launching a new brochure for the JetStream Ionising Air Knife System.

The JetStream system is an energy efficient, blower driven ionised air knife system that has applications in a wide range of industries including Automotive, Beverage, Composite Materials, Glass and Plastics.

JetStream is used to remove contamination from the critical surfaces of parts at different stages of production processes such as prior to painting, filling or stacking. JetStream is a cost effective replacement or alternative to compressed air systems as it can offer energy savings of the order of 70%. Investment in a JetStream system may also qualify for an interest free loan from the Carbon Trust (contact Meech for details.)

The new brochure features case studies from existing customers, including:

- Honda of the UK Manufacturing Ltd
- RPC Containers Ltd
- Big Bear Plastic Products Ltd
- Visteon Automotive Systems

To request your copy of the new brochure please email your contact details to: jetstream@meech.com

If you wish to discuss a potential JetStream application, please contact Adam Batrick on 01993 706700.

Industry Guides Available Now!

Meech has produced four new guides to static control in the Converting, Packaging, Plastics and Printing industries. Each guide contains details of common static issues and proven solutions and is available in the download section of our website (www.meech.com). The guides will be available shortly in printed booklet format.

Customer Stories

Fascia Graphics

Fascia Graphics is the market leader in the production of membrane keypads in the printed graphics industry and has recently invested in the latest static control technologies from Meech.

915 AC and 976 Pulsed DC ionising bar systems together with 935 ionising blowers have been installed on Fascia's new state of the art printing line to reduce dust attraction and electrostatic discharge. As a result, Fascia have been able

to achieve further improvements in product quality over and above their already high standards.

EXHIBITIONS

Meech is also exhibiting at:

ProPak Show '06
Shanghai, China
July 10th - 14th 2006
Stand: 1D28

Taropak
Poland
September 18th - 20th 2006

SGIA '06
Las Vegas, NV
September 26th - 29th 2006
Booth #2230

Pack Expo '06
Chicago, IL
October 29th - November 2nd 2006
Booth #S-105

ICE 2007
Munich
March 27th - 29th 2007

K 2007
Düsseldorf
October 24th - 31st 2007

Offices in:

Distributor Training

Meech recently held its first 3 day "advanced" training programme for established distributors from Belgium, Germany, Ireland, Netherlands and Switzerland. The programme was designed to provide in-depth product and applications knowledge and to share experience gained over several years of solving customers' static problems. Particular emphasis was placed on the JetStream product range, which offers exciting growth potential.

Sales and Marketing Director, Steve Pheasant commented, "This was the first of what I hope will be regular advanced training sessions. The value of bringing distributors together to share their experience cannot be overstated".

Strong Progress In The East

Meech CE, based in Budapest, has continued to make outstanding progress. Nigel Taylor, Meech Co-ordinator for the region, comments "We now have a strong distributor network in place in Hungary, Poland, Czech Republic, and Slovenia. Exhibiting at the Plastpol, Taropak, Ceje Print Expo and Hungary Print Expo shows has reaped dividends in terms of building awareness. We have established close relationships with several major new customers in the region and the future looks very promising indeed".
