

Water Cleaning

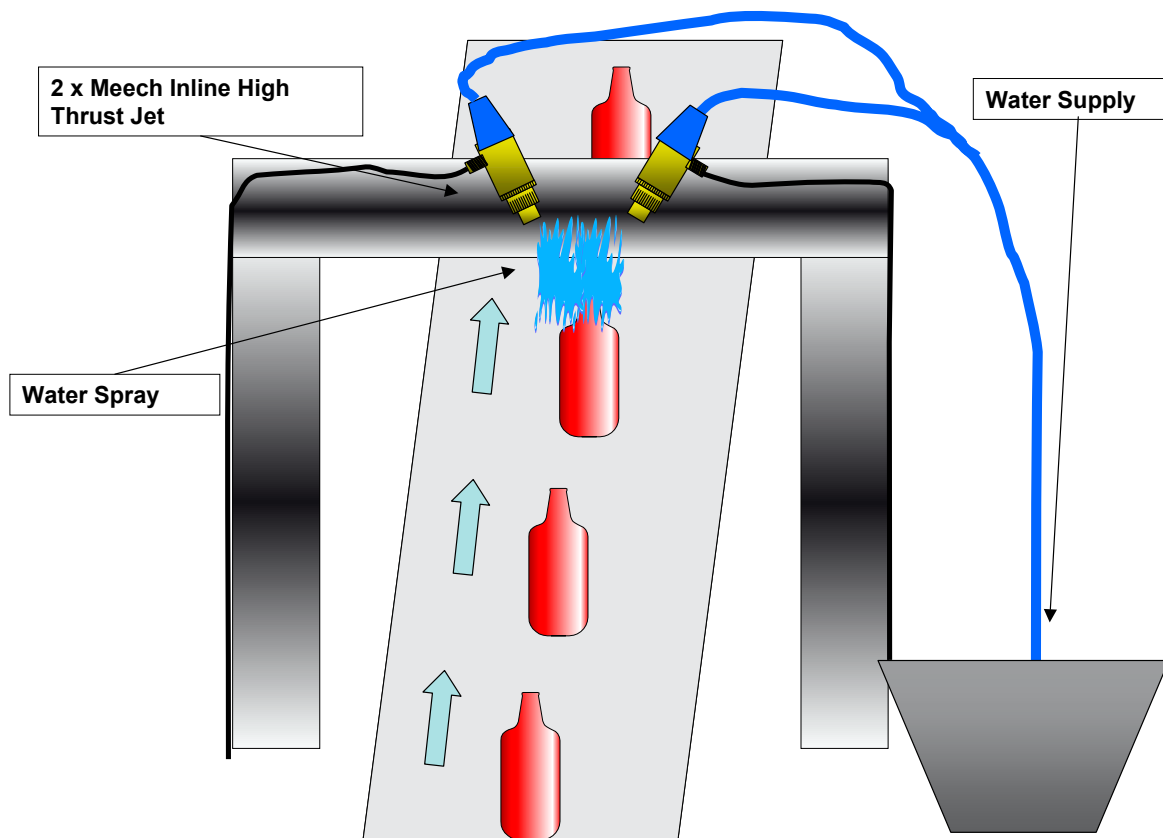

Energy Saving High Thrust Jet

MAT - Energy Saving High Thrust Jet
- Water Cleaning - ISSUE 1/EN-01/10

Application/ Problem

Where space is a premium Meech High Thrust Jets can be used as a space saving way to clean the inside of bottles or containers. Air is used to pull water from a supply, the entrainment process means there is no need for large and costly pumps or water systems.

Example/Solution

A bottle manufacturer needed to clean the inside of bottles before filling. There was no room on the line for a water system and all other options were either uneconomical or too time consuming. Meech In-line High Thrust Jets were angled to blow water into glass bottles. The High Thrust jets provided a fast effective way to clean the inside of bottle.
