

# Replacing Open Pipes/ Air Assistance

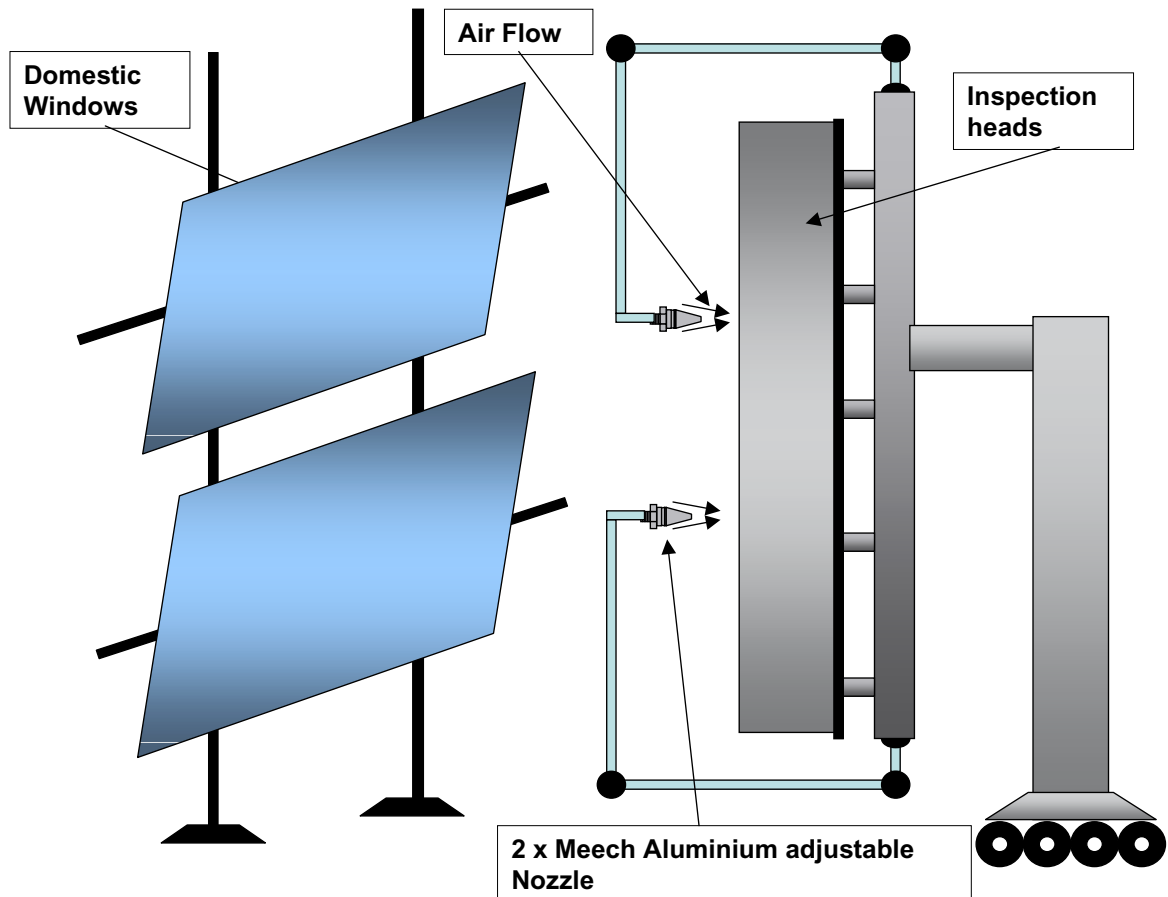

Energy Saving Safety Nozzle & Blow Gun

MAT - Energy Saving Safety Nozzle  
& Blow Gun - Replacing Open Pipes/  
Air Assistance - ISSUE 1/EN-01/10

## Application/ Problem

Meech Air Nozzles can be used on virtually any application that currently uses an open compressed air pipe.

## Example/Solution

A company produces a glass inspection machine for home windows. The machine searches for defects in the glass using inspection heads. The heads are encased behind glass. The glass becomes contaminated with debris every so often. Open-air lines were used to blow clean the glass. By switching to a Meech Air Nozzle the air consumption and cost was halved and because of the extra thrust the Air Nozzles produce the number of false readings the machine gave was reduced.
