

# Blow off/ Blowing 2

Energy Saving High Thrust Jet

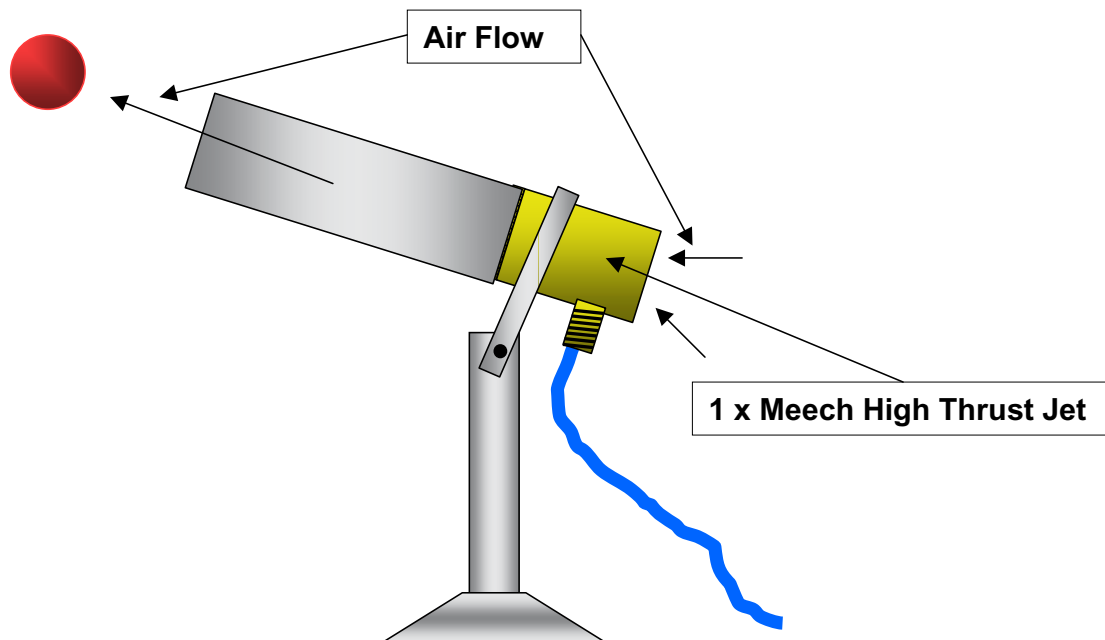

MAT - Energy Saving High Thrust Jet

- Blow off/ Blowing 2 -

ISSUE 1/EN-01/10

## Application/ Problem

Meech High Thrust Jets allow you to use a small amount of air to produce a large blast. They will also lower the noise levels of conventional sources of air. The high blast of air allows you to blow items over a long distance. The energy saving capabilities of the High Thrust Jet means only a tiny amount of compressed air is needed. This reduces air consumption and costs.

## Example/Solution

Model/Film makers can use it with actuating solenoids for a variety of applications within the special effects of films.

Products shown in this document may be covered by one or more patents, patents applied for and/or registered designs and/or trade marks. For further information please refer to our Head Office or visit [www.meech.com](http://www.meech.com).
