

# DVD Manufacture

Static generation

Plastics>Rigid>DVD>001 ISSUE 1

## Problem

---

Two CD's are effectively sandwiched together to form a DVD. The 2 disks are held together by a special adhesive formulation. As the two disks have similar polarity charges, they do not always allow a perfect bond. This is seen as pin holes.

## Solution

---

By charging one disk to the opposite polarity, perfect bonding is achieved.
